

Pre-scrum Analysis

- How will you communicate with your client(s)? *all of you / single point-of-contact / subset, e-mail / phone / in-person, any periods of inaccessibility / spring break*
- Do you have a regular meeting schedule? *strongly suggest you have at least 1 hour per week devoted to a group meeting about the project*
- How is your group going to communicate? *weekly meetings / meet as needed / e-mail / sourceforge / wiki / google doc*
- How are you going to record/preserve those communications?
- How are you going to work? *always as a group / sub-groups / team programming / independently except for scheduled meetings*
- What Version Control System are you going to use for the code? *likely Git or Subversion*
- How will you document the tasks that you have developed from the user stories?
- The master and current sprint list (those tasks selected to be completed during this scrum sprint) will be a Google spreadsheet with group and instructor access.
- What documentation for the client will be required? How are you going to create that? *user's manual / in app help / FAQs / administrator's manual / developer's manual (how to add functionality) / etc. which will differ based on each project*
- What is your task list for Scrum Sprint #1?
